Fluorotechnics secures US patent approval for fluorescence technology

15 June 2009 – Sydney, Australia: Fluorotechnics Limited (ASX: FLS) has secured one of its most important intellectual property assets after being granted the US patent for its unique fluorescence technology.

Fluorotechnics owns the intellectual property to a new family of fluorescent molecules – the *epicocconone* family of fluorophores that are used for detection and measurement in research, diagnostics and quality control.

The granted patent describes an increase in the fluorescence in a fluorescent dye which is the basis for Fluorotechnics unique technology for detecting and measuring important molecules like proteins.

“This is a core patent in our intellectual property and the United States is a prime commercial target for Fluorotechnics. This patent strengthens the company’s assets and commercial position,” said Mr James Walker, CEO of Fluorotechnics.

The method of enhancing fluorescence technology is already patented or pending by Fluorotechnics in several other jurisdictions including Europe, China and Australia.

The US patent number is 11/235931 and was filed on 26 September 2005.
