

ASX Announcement
Updated revenue forecast for 2009 / 2010

6 April 2010 – Sydney, Australia: Fluorotechnics Limited (ASX: FLS) expects sales revenue for the year ending 30 June 2010 to be approximately \$5 million (2008/2009: \$3.2 million). This is a shortfall against the prior revenue guidance of \$7-\$10 million and is primarily a result of a slower than expected growth rate of sales of our new HPE FlatTop system.

In elaboration, the level of interest being generated with customers is strong however, it is taking longer than expected to complete the sales process of the system. In many cases, this stems from a greater than envisaged time for the customers to obtain approval for this type of capital expenditure.

To a lesser extent sales have also been negatively impacted by unfavourable exchange rates.

The company remains confident of the sales potential of our products - especially the new HPE FlatTop system.

Since the launch of the HPE FlatTop system, customers have been almost universally impressed by the superior and attractive performance of the system. This is evidenced by the growing number of opinion leaders who have become customers – see the attached shareholders update for their testimonials.

Due to the reduced sales expectations, the company will be seeking to raise additional working capital. As details arise we will advise the market.

About Fluorotechnics (ASX:FLS): Fluorotechnics, under the trade brand of Gelcompany is a global company that develops, manufactures and supplies products that enable Life Scientists to better measure biological processes. Our products have applications in proteomics, genomics and cell biology and are routinely used in research, development, quality control and diagnostics.

We are focused on the development of innovative products, integrated into novel solutions that provide enhanced performance. Our core skills and technology advantage are in electrophoresis, where we have championed the introduction of High Performance Electrophoresis (HPE), a novel electrophoresis workflow solution.

We are dedicated to providing quality products, support and service and to improve scientific methodologies through the development of technically superior products that are also environmentally friendly, safe and easy to use.
